

# FIONA *Model D-78 BHA*

## Seed Drill 1,50 m

for sowing in normal and in high seedbeds

The BHA drill uses an advanced peg-type sowing system that ensures precision drilling of a wide variety of cereal crops including rice and wheat, granular fertilizer, grass and seed crops, as well as more special crops, such as carrots and lettuce.

This means higher yields at considerably lower costs because with FIONA drills you are giving the best start in life to each and every seed. The drill has a large 150 liter hopper capacity - rugged 600 x 12 tyres - and a wide range of optional equipment.

The design and construction of the drill is of very high quality to achieve a long service life and exceptional reliability in the field. To this end, all the components are produced in the FIONA factory under continuous supervision and quality control.

This versatile drill comes with a standard 3-point linkage and can easily be changed to either trailer or animal drawn by mounting special fittings that are available as extra equipment. For sowing grain and fertilizer at the same time the drill can be converted to a combined machine by mounting the FIONA fertilizer hopper model GK 66 or FG.

### Specifications D-78 BHA - wheel 600 x 12"

Sowing width m	Number of rows			Row spacing mm	Weight kg	Hopper capacity l	Overall width m
	Shoe coulters	Single disc coulters	Double disc coulters				
1.50	13			11.5	180	150	175
1.50		11		13.6	200	150	175
1.50		10		15.0	194	150	175
1.50		9	9	16.6	187	150	175

# FIONA

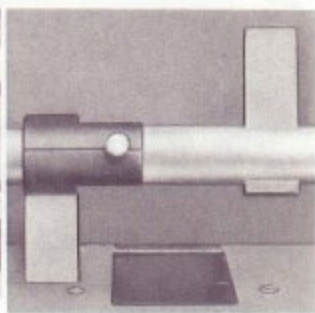

The desired sowing quantity can be selected easily and precisely by adjusting only 1 gear lever.

Special 3-finger attachments can reduce the quantity sown by roughly 65 %. This feature is very important for sowing very small quantities.

For row crop work involving small seeds individual seed containers can be fitted in the hopper.

Extra Wings can be mounted on the sowing axle without the aid of tools to ensure a continuous flow of difficult seeds into the feed cup.

## Seed Drill 1,50 m

Equipped with traces for animal draft

Here is the trailed version equipped with special conductor tubes for sowing granular fertilizer in row crops. Tractors with as little as 12 h. p. can be used.

**3-point mounted? Trailed? Animal drawn?**  
**THE CHOICE IS YOURS**
